

KCR Environmental Policy

KCR is committed to supporting the principles of environmental sustainability by:

- Minimising our ecological footprint in a practical and sustainable way; and
- Motivating all Presenters, other Volunteers, and Contractors to promote an environmentally responsible culture.

The Station will:

- Promote and foster the development of an environmental ethos and sustainable practices
- Establish, implement, maintain and regularly review an environmental management plan informed by best practice
- Minimise its ecological footprint, by reducing pollution, environmental harm, greenhouse gas emissions, use of natural and manufactured resources, waste generation, and energy and water consumption and improving efficient use of resources in a practical and sustainable way
- Promote the waste hierarchy which seeks primarily to avoid and reduce the use of resources, followed by their re-use, recycling and responsible disposal
- Communicate the Station's sustainability performance to our members and the wider community, especially by broadcasting appropriate interviews and messages; and
- Protect and enhance biodiversity, and natural and cultural heritage, where present.
